

CARULUX® HDPE 02 F98 c310

TECHNICAL DATA SHEET

Our RecyClass-certified HDPE flakes are made from household packaging waste and processed using advanced mechanical recycling technologies, including precision sorting and intensive hot washing – all powered by renewable energy. Designed for high-performance applications, these flakes support waste reduction, resource efficiency and the circular economy. They offer sustainability and consistent quality without compromise.

This technical data sheet is based on laboratory analyses and our current state of knowledge. The data represent average values; please contact us for specific tolerances. Although stringent quality controls ensure consistent quality, variations may occur due to the nature of recycled materials. Users should make their own assessment of suitability for their applications. This document is not legally binding, and compliance is the responsibility of the recipient.
